

Companion+

Mobile Safety | Telematics

Not sure which version of Companion+ is right for your organization?

Companion+ Mobile Safety and Companion+ Telematics offer the same core services, but differ in how they integrate with data and the extra features available.

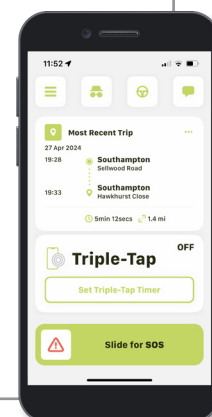

Companion+ Mobile Safety

Advantages

- ✓ **Simple and fee free installation**
Just download the app from your device app store.
- ✓ **Follows the driver, not the vehicle**
Even if the driver is in a rental or pool vehicle.
- ✓ **Remote updates and upgrades**
No engineering costs are incurred.
- ✓ **Optional extras**
Personal safety and pre-drive checks features are only available on the app.
- ✓ **Enhanced crash detection**
Crash detection is enabled when travelling as a passenger.
- ✓ **Emergency call check-in**
Emergency services can be dispatched to your location.

Disadvantages

- ✗ **Less accurate recording of trip start/stop events**
The app relies on mobile sensors, rather than direct connections with the vehicle.
- ✗ **Phone reliability**
Users are responsible for remembering to bring their phones on every trip.
- ✗ **Device dependant**
The app relies on the device to meet certain sensor requirements to access all features.
- ✗ **User Reliability**
Users are responsible for installing the app, versus a company action to install a fixed device on their vehicle.

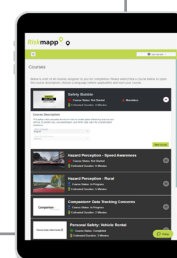

Companion+ Telematics

Advantages

- ✓ **Increased detection accuracy**
Integrates directly with the vehicle compared to an app.
- ✓ **All trip information captured**
The app has the ability to go incognito, telematics cant.
- ✓ **Company enforcement**
Easier to implement and mandate as a company asset.
- ✓ **Compatibility**
Integrates with all vehicle types with telematics.
- ✓ **Additional detections**
Can detect data such as no seat belt use or EV charge etc.
- ✓ **Additional uses**
Data can be used for logistics and route optimisation.

Disadvantages

- ✗ **Cost of installation**
If telematics is not already used by the fleet, installation can be typically more expensive compared to the app.
- ✗ **Updates & upgrades**
Manual update and upgrades will require an engineer.
- ✗ **No extra features**
You will not have access to emergency or personal safety protection features.
- ✗ **Integration lead-time**
It may require time to integrate if there is not a pre-established telematic connection, and roll out in mass numbers.
